**creom** UK LTD  
moisture suppressant for concrete

## THE FAST-TRACK SOLUTION

Creom is a quick acting, non-toxic, environmentally friendly moisture suppressant that enables recently laid concrete floors to be speedily brought into use.

The advantages to the contractor, specifier and end user are:

- effective on concrete with up to 98% (RH) relative humidity
- the fast-track solution to moisture in concrete floors
- quick, reliable, environmentally-friendly and extremely cost-effective
- no mixing required – use straight from the container
- long shelf-life – typically 12 months unopened and 2-3 months once opened
- shortening of construction time – bringing the building earlier into use and reducing costs
- zero toxicity – minimal disruption to normal activity in surrounding areas
- compatible with underfloor heating systems

■ Queen Mary's College - Basingstoke  
New Build 3,000 m2 over 3 floors.  
Tarkett Accent Wood Vinyl.

■ Immigration Return Centre - Heathrow  
10,000 m2 Fast Track completion using Creom throughout.  
Finished Floor coverings: Forbo Nairn Marmoleum and Safestep, Flotex and Heckmondwyke Carpet tiles.

### GENERAL

In today's construction industry, "fast-track" building is of increasing importance, with continual pressure to get buildings into use as quickly as possible. This pressure is especially felt in the flooring sector where, traditionally, damp sub-floors can seriously delay job completion times.

Effective damp suppression can be incorporated economically and safely into new and refurbished flooring systems using Creom moisture suppressant.

Creom moisture suppressant is used where residual sub-floor moisture levels are high. It is easily and quickly applied using a good quality roller or spray. It is a water-based, non-toxic product that requires no mixing or special safety procedures. Drying times are typically 1-4 hours which means that the two coat process can normally be completed within one working day.
